

## **GLO PLATS README**

**2/27/2020**

Based on the Eng. Dept. CAD Standardization development, took legacy drawing (T87R11) and renamed layers to new format (Discipline Designation VP) and updated text / Plat reference information. Then, created new View reference (orig. was 100inx100in Sheet) to fit on Large Format plotter.

One thing project didn't do was to trace the Water / Meander limit lines as part of those Sections where original GLO Lots were created. Possibly this could be performed in future by simply Downloading  
(Link) the ISU Raster images then rubber sheet them to fit the CAD linework.

Also, review the GLO Plats regarding any Dates and Document references that could possibly be added to the TEXT for Plat reference (Typical).
